**Contractor:**

**HighwayDrain**  
**TravelCenters of America in-house**  
**Kubat Equipment & Service Company, Denver, CO**

During the refurbishment of this busy truck stop on Interstate 80 near Cheyenne, Wyoming, a heavy duty drainage system was needed to keep the large areas of hardstanding free of stormwater and snow melt.

The drainage system also needed to contain any fuel spills or contaminated run-off from nearby refueling facilities.

HighwayDrain was selected as it is totally manufactured from polymer

concrete, a material with excellent corrosion resistance to hydrocarbons and other common automotive and road deicing fluids.

The integral grate and trench drain is load tested to DIN 19850 Class E, over 135,000 lbs. and offers excellent ability to withstand to frequent braking and turning of extreme traffic.
